

SPECIFICATION AMENDMENTS

Please amend the first paragraph on page 17 as follows:

In accordance with another preferred embodiment of the invention, a contact lens of the invention comprises molecular imprints for the analyte of interest. For example, as shown in Figure 1, a contact lens **1** having a back concave-surface **11** and a front convex-surface **12** can be made from a polymerizable composition comprising an analyte of interest. After curing the polymerizable composition, the analyte of interest can be extracted out to provide molecular imprints **105** for the analyte of interest in the contact lens.
